GETTING STARTED

Introduction to Walmart listing quality

When you list your products on Walmart Marketplace, you’re putting them into a giant storefront with thousands of listings visible to millions of customers at any one time.

When customers search for whatever they need, you want your products to stand out.
Where do you start when you need to optimize your listings to attract customers and win more sales? How do you improve offer quality for the best Walmart.com shopping experience? What do Walmart site algorithms look at when ranking your products in search and browse results?

**In this brochure we’ll examine listing quality**—what makes the best offers, where to make improvements, and why it’s important to have the most optimal listings available.
Once you’ve got a product up and selling, it’s time to think about optimizing your performance for increased sales.

At Walmart, we look at **3 factors that determine your listing quality score: content, offer and performance**. These make up the optimization triangle – a holistic view of ways to achieve top-performing listings.

**Offer**
Item price, shipping price and speed, in-stock rate.

**How competitive is your offer?**

**Content**
Product category, title, descriptions, images, attributes.

**How descriptive is your listing?**

**Performance**
Seller Order Defect Rate (ODR), policy adherence, prompt customer response.

**How great is your customer experience?**
